Hi Folks,

I'm new in this mailing list, so at first: Hello!

I'm using openVZ on a server with multiple disks (SSD und HDD) and wanted to put the machines on the SSD while keeping /home (larger) on the Harddisk. The problem is that I'm using 2nd level quotas for my users home directories and they are no longer working when I use it on the bind mounted filesystem.

I found only this old post:

<http://forum.openvz.org/index.php?t=msg&goto=33366&>

Is it really impossible by design, is it on the roadmap or should it work?

many thanks

Harald
