Hi,

More questions: :-)

Boot your system the right kernel -> have you modified your bootloader
e.g. grub or lilo ?

Which version show "uname -r" ?

Are the modules "vzmon vzquota vzdev" loaded ?

Are the modules on the right place :

/lib/modules/`uname -r`/kernel/kernel/vzmon.ko

/lib/modules/`uname -r`/kernel/fs/vzquota.ko

/lib/modules/`uname -r`/kernel/kernel/vzdev.ko

Can load manually the module above, and listed by lsmod ?

Thorsten
