Subject: Re: Pureftpd and Linux capabilties
Posted by dev on Sun, 02 Jul 2006 19:20:34 GMT

1. you can strace pureftpd to check what capabilities it tries to set and fails.
See http://wiki.openvz.org/Stracing_a_program for information on how to strace an application.

2. after you found what's wrong with capabilities you can add missing capability to your VE with vzctl command. Check vzctl man on how to control VE capabilities (http://openvz.org/documentation/mans/vzctl.8):

#vzctl set <VEID> --capability capname:on|off

Note: changing capabilities requires VE restart.
