SOLVED: problem is vzctl debian scripts (backported from 3.0.25.2 and everything works fine).

I have the exact same issue: after upgrading the kernel to version 2.6.18-194.26.1.el5.028stab081.1 every debian based container has an empty routing table (connect: Network is unreachable).

route -n
Kernel IP routing table
Destination   Gateway   Genmask   Flags Metric Ref   Use Iface

NOTE: Anyother redhad/centos/fedora container works just fine...

Also, after adding/removing and IP address from the container the routing table looks ok.

 route -n
Kernel IP routing table
Destination   Gateway   Genmask   Flags Metric Ref   Use Iface
0.0.0.0   0.0.0.0   0.0.0.0   U   0   0   0 venet0

But, after restarting the container, the problem persists.

vzctl version 3.0.26
2.6.18-194.26.1.el5.028stab081.1 x86_64
CentOS release 5.5
