Subject: Re: Kernel not installed?

Ok, if I understand correctly, you have a 64-bit server, running 64-bit CentOS 5.5.

The error you get when trying to start the vz service is normal, since you have an openvz kernel installed, but you are not running it. According to 'uname -a', you're running the standard CentOS kernel.

Is there a reason why you have installed a 32-bit ovzkernel-ent instead of the 64-bit ovzkernel?

If there is no special reason, you should:

yum remove ovzkernel-ent
and then:
yum install ovzkernel.x86_64
Then check the settings in /boot/grub/grub.conf so that the proper kernel is set as default and reboot.
