
Subject: Slow start when VE have lots of IPs

Hi,

I have a VE with 300+ IPs assigned to it. The start process (not VE boot) takes about 15 minutes.

The process that takes time is `/bin/sh /usr/lib/vzctl/scripts/vps-net_add`

Is there a way to make this run in background? I usually don't need all IPs upfront, only the first one.

Thanks!
