I am running RHEL6 042test008.1, but the parameter for specifying the number of CPUs within a container doesn't seem to work.

If I set it to something like 1, I still see all node CPUs with the 'top' command, whereas I would expect to see 1 CPU.

vzctl.log shows the expected output, i.e. "Setting CPUs: 1".

Is this a known issue? I searched the forum but didn't find any applicable posts.
