Subject: Re: VPS for Oracle, requires SWAP partition
Posted by vali.dragnuta on Thu, 01 Dec 2005 16:50:21 GMT

I managed to install oracle on a openvz PVS. (centos 4.2)
Swap is a non problem, it just complains about it but it does not matter.
I had bigger problems setting the right limits, as oracle is pretty greedy. Only creating the
database requires a lot of kmemory (about 12 megs).
/proc/user_beancounters should be anybody's friend when trying to install oracle.
Anyway, I managed to get it working.
