I have a newer version of OVZAdmin.

ovzadmin-pre3

Changes;

1. Slim down code,and got rid of useless verbose prompts.
2. Supports disk-quotas for VE at build time.
3. Changed simple text database default directory to;

/var/log/vpsdatabase

If you do not have it,no worries.

4. The default VE config was changed from older version of OVZ,
   to reflect newer versions.
   A VE config is "unlimited".

5. "GUI" is sleeker.(at least for text)

Right now,I'm going over some submitted coding that looks promising,so it will speed things up a bit.
VE maintenance options are still not complete.
Node Administration will be incorporated with some of the submitted code,and some I found.
You may still want your own.
No screen shots,as the ones posted,gets you in the ball park.
