Stock Debian 6.0 (Squeeze) doesn't require this, it runs libc6 2.11
which doesn't depend on kernel version.

We have several Squeeze containers running happily on RHEL5 OpenVZ
kernel without tweaks (however latest 089.1 stable ovz kernel is highly
recommended since it corrects some serious bugs).

I believe problem arose maybe because Hristo Benev had some
testing/unstable packages installed before upgrading to Squeeze.
