Hi all,

Just installed Openvz and using ovz-web as a gui.

My problem is I created a VM using a openvz template for centos5 i386 and all looks good, i can ssh from the openvz host to the guest vm, yet the guest vm cannot acces the outside network.

When I do an ifconfig on the guest vm, i get this:

```
venet0  Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00
        inet addr:127.0.0.1 P-t-P:127.0.0.1 Bcast:0.0.0.0 Mask:255.255.255.255
        UP BROADCAST POINTOPOINT RUNNING NOARP MTU:1500 Metric:1
        RX packets:35 errors:0 dropped:0 overruns:0 frame:0
        TX packets:36 errors:0 dropped:0 overruns:0 carrier:0
        collisions:0 txqueuelen:0
        RX bytes:3944 (3.8 KiB) TX bytes:4733 (4.6 KiB)
```

```
venet0:0 Link encap:UNSPEC HWaddr 00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00-00
        inet addr:xxx.xxx.8.65 P-t-P:xxx.xxx.8.65 Bcast:xxx.xxx.8.65 Mask:255.255.255.255
        UP BROADCAST POINTOPOINT RUNNING NOARP MTU:1500 Metric:1
```

My problems, as im looking at this, thinking I just found my own issue... The netmask is suppose to be 255.255.255.192 and gateway xxx.xxx.8.1,

But I cannot see anywhere where to set this up, or is it even set correctly?
