Subject: vzmigrate standby mode

Hello,

I think it will be very convenient to have a way to prepare/clone a VPS ready to start at moment notice (standby mode), a kind of action ready backup.

I think the best way to do that is to modify vzmigrate to add "--standby", such the vzmigrate will work in --keep_dst mode and doing the --online mode but NOT stopping the VPS source and keeping the destination VPS in stop mode.

Such starting vzmigrate --standby lets say once a day, could keep a fresh enough VPS ready to take action in case of major trouble on production HOST.

Is there a better way to achieve this?, is vzmigrate the best candidate to do it? if so, I'll try to add "--standby" to vzmigrate.
