Hi all,

I'm trying to done a dual primary cluster on RHEL5 with ocfs2, but it seems missing module ocfs2 in the openvz RHEL kernel (last kernel I've tested : ovzkernel-2.6.18-238.9.1.el5.028stab089.1.x86_64) but this module is in debian openvz kernel (2.6.32-5-openvz-amd64 for exemple).

For RHEL, is it a missing or is it normal ?

Juste for information gfs2 module is well in RHEL openvz kernel.

Thanks in advanced for your return.

Best Regards
