Subject: Network Speed Slows Down on CT's
Posted by bigmyx on Wed, 18 May 2011 11:48:41 GMT

Hi,

We have a HW with a several containers on it.
We are experiencing the network speed issues inside those containers:
Trying to WGET a big file from the CT's shell and get an average speed of 30Kps (on 100Mb link and 1000Mb NIC)

The strange issue is that when I restart *ANY* of CT's on this HW node, the speed inside CT's is back to normal.
As the time goes by (30-40 min.) the speed slows down again.

My Kernel version is: 2.6.18-238.5.1.el5.028stab085.3 (x86_64)

Is it some known issue ?

Thanks !
