Is this problem (<http://forum.openvz.org/index.php?t=tree&th=717&mid=3736&&rev=&reveal=>) solved? Because I am experiencing the exact same problem.

BTW: stopping iptables on the host system solves the symptom: I can do a ping google.com and the ping works. When I start iptables on the host, it doesn't work anymore. Same for wget etc. In my opinion, stopping iptables is not a professional solution, or did I miss something about openvz security?

These are the iptables rules on the host (no iptables on the ve yet):

```
# /sbin/service iptables status
```

Table: nat

```
Chain PREROUTING (policy ACCEPT)
target    prot opt source          destination
```

```
Chain POSTROUTING (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
Chain OUTPUT (policy ACCEPT)
```

```
target    prot opt source          destination
```

Table: mangle

```
Chain PREROUTING (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
Chain INPUT (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
Chain FORWARD (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
Chain OUTPUT (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
Chain POSTROUTING (policy ACCEPT)
```

```
target    prot opt source          destination
```

Table: filter

```
Chain INPUT (policy ACCEPT)
```

```
target    prot opt source          destination
```

```
RH-Firewall-1-INPUT  all  --  0.0.0.0/0           0.0.0.0/0
```

```
Chain FORWARD (policy ACCEPT)
```

```
target    prot opt source          destination
```

RH-Firewall-1-INPUT all -- 0.0.0.0/0 0.0.0.0/0

Chain OUTPUT (policy ACCEPT)

target prot opt source destination

Chain RH-Firewall-1-INPUT (2 references)
