I tried upgrading to the latest kernel version and still have this problem. The files are all there and everything seems to run fine apart from been able to see disk space used.

Please provide the output of the following commands (in a container):

```
ls -l /etc/mtab  
ls -l /proc/mounts  
cat /proc/mounts  
cat /etc/mtab
```

And on the host system:

```
uname -a  
rpm -q vzctl
```
