Sorry for nitpicking but can someone please update the list of mirrors
for centos5 repo at

http://download.openvz.org/kernel/mirrors-rhel5-2.6.18

in this list http://mirrors.igsobe.com/openvz/ is down which is kinda
ok, but http://mirror.softaculous.com/openvz/ has not been updated
since April which is really a pain if it gets picked by fastestmirror
plugin.

thanks
