Subject: TUN/TAP problem
Posted by Mixtery on Fri, 01 Jul 2011 10:42:34 GMT

Hi,

TUN/TAP seems to be non-functional.
After following the steps found on:

wiki.openvz.org/VPN_via_the_TUN/TAP_device

I still get an error on the VPS when giving the command "modprobe tun" : FATAL: Could not load
/lib/modules/2.6.18-194.17.1.el5.028stab070.7/modules.dep: No such file or directory

Anyone got any good suggestion for this?

Thank you for your time and efford.
