Still no way to use vzmigrate to migrate containers from Virtuozzo to OpenVZ ?

I did try, but got the following error:

Quote:

```
# vzmigrate --remove-area no --nostart root@x.183.208.94 421
root@x.183.208.94's password:
bash: /usr/sbin/vzmdest: No such file or directory
seems you need install migrate package on destination node
Can't init migrate : seems you need install migrate package on destination node
```
