What exactly are u trying to archive?

You're VPS resides in /vz/private/#ID and /vz/root/#ID is only created for a running VPS. So binding something to /vz/root doesn't make any sense.

Why don't just put smthg in your fstab like

/dev/sdc1 /vz/private/1001 ext3 defaults 0 0

haven't tried that yet, but i don't see why it shouldn't work....

greetings, j
