It didn't install, it gives the warning then exits.

```
root@hn1 vz]# vzyum 102 install flex
Warning: Set baseinstall for fedora-core-5-i386 OS template not found
[root@hn1 vz]# vzctl exec 102 lex --help
bash: lex: command not found
[root@hn1 vz]#
```

However, from strace I found a missing file.... I found the below fix works (and removes the warning):

```
cp /vz/template/fedora-core/5/i386/config/minimal.list
/vz/template/fedora-core/5/i386/config/baseinstall.list
```

Cheers
