Hi all,

I'm new here, so I'm sorry if this question was already mentioned here. I'm only VPS user. I asked my admin to increase "numpty" limit. He agreed for this, but he is also beginner in openvz and he told me to find command what he have to type

I found this command:

vzctl set 150 --numpty 50:50 --save

150 is VEID of my VPS. He restarted machine, but I still see that numpty limit is unchanged:

cat /proc/user_beancounters

Version: 2.5

uid	resource	held	maxheld	barrier	limit	failcnt
150:	kmemsize	13867993	31767538	2147483646		2147483646

numiptent	14	21	999999	999999	0
-----------	----	----	--------	--------	---

Kerel version on VPS is 2.6.18-238.9.1.el5.028stab089.1 I know is very old but I hope there will be solution without the need to upgrade.
