Hello!

I try to migrate real server with CentOS 5.6 to VPS following
wiki.openvz.org/Physical_to_container and wiki.openvz.org/Creating_a_CentOS_5.0_Template
for instructions, but no active network is running. ifconfig not show any devices

the problem is same as the problem in my post about Mandriva VPS creating

P.S.

service network restart # return:

service network restart

Shutting down loopback interface: [OK]

SIOCGIFFLAGS: No such device

Bringing up loopback interface: Device lo does not seem to be present, delaying initialization.
[FAILED]

Bringing up interface venet0: Device venet0 does not seem to be present, delaying initialization.
[FAILED]
