
Subject: vzlist stderr message Invalid value for DEVICES

I started getting a strange stderr message from vzlist

```
[root@rc5 ~]# vzlist | head
Invalid value for DEVICES=c:196:255:rw, skipped
CTID      NPROC STATUS    IP_ADDR      HOSTNAME
...
```

Thanks for any clues or information about how I can find the "c:196:255:rw" device.

Cheers!
Gary
