Hello

My openvz is working good with 2 ct on it.

1 is a data server the other is a vnc server with kde.

Problem is when is copy data of my ct server(debian) over the network to my windows pc i get lost of the connection to the server and ct's.

Zo when i copy a avi movie of a 700mb to my windows pc (have just different pc's fot it) is lost my connection to the server and the copy stops.

afther a minut i get the connection back.and the server is still running.

What can i do aboute this problem??
