
Subject: Kernel is very big

Hello,

I compiled a kernel with the last openvz patch. After my compiling I got a 400 MB kernel. When I disable "kernel debugging" at kernel hacking I got an issue.

```
LD    fs/proc/proc.o
```

```
LD    fs/proc/built-in.o
```

```
LD    fs/built-in.o
```

```
make[1]: Leaving directory `/usr/src/linux-2.6.32'
```

```
make: *** [debian/stamp/build/kernel] Fehler 2
```

How can I create a kernel with a size of 20-30 MB?

Thanks for every supply,

Tuxi
