I can't give more details about Adaptec since we don't use it but CentOS itself supports more than 2TB per partition.

How did you format your partition, did you use fdisk or parted? I'd recommend the latter, I believe fdisk might be your source of problems since it doesn't support GPT.

BTW, I strongly suggest updating your server from CentOS 5.5 to current (5.6) and keeping it updated when 5.7 comes out.
