Hi!

I try to download suse template and after creating server can't start, my vz.log is clear, last actions are:

2011-08-23T04:54:14+0400 vzctl : CT 34120 : Container start in progress...

2011-08-23T04:54:17+0400 vzctl : CT 34120 : Container is unmounted

It's possible to start suse container under debian host?
