system: centos 2.6.18-238.el5xen 64-bits

ovkernel: ovzkernel-2.6.18-238.19.1.el5.028stab092.2.x86_64.rpm

memery: 8G

1. When I create a vps error:

#####

tar: ./sbin/ifenslave: Cannot open: No such file or directory

tar: ./sbin/pam_tally2: Cannot open: No such file or directory

tar: ./sbin/dmraid: Cannot open: No such file or directory

tar: ./sbin/shutdown: Cannot open: No such file or directory

tar: ./sbin/mkfs: Cannot open: No such file or directory

tar: ./sbin/e2label: Cannot hard link to './sbin/findfs': No such file or directory

tar: ./sbin/rmmod: Cannot open: No such file or directory

tar: ./sbin/mpath_prio_ontap.static: Cannot open: No such file or directory

tar: ./media: Cannot mkdir: Disk quota exceeded

tar: ./selinux: Cannot mkdir: Disk quota exceeded

tar: ./mnt: Cannot mkdir: Disk quota exceeded

tar: ./tmp: Cannot mkdir: Disk quota exceeded

tar: ./boot: Cannot mkdir: Disk quota exceeded

tar: Error exit delayed from previous errors

vps-create ERROR: Error in tar --numeric-owner -Sp -z -xf /vz/template/cache/centos-5-x86.tar.gz

Creation of container private area failed

#####

2. when I start a previously created vps, then

#####

Starting container ...

vzquota : (warning) block_hard_limit [10695575] < block_current_usage [4194273]

vzquota : (error) path to mount point can't be read from config file,

use -p <mount_point> option

vzquota on failed [13]

#####

How is this going?

How to solve it?

Thanks
