Hello

I have an openvz node with only one container (Cpanel server).

Yesterday I had many memories issues:

"Unable to fork: Cannot allocate memory"

Can someone help me to optimize my node setting ?

I have a 4Gb node and I can use all node resources for the container.

This is my resources output:

<http://pastebin.com/iPXnf0Se>

It appears this parameter failed:

```
cat /proc/user_beancounters
```

```
Version: 2.5
```

```
uid resource
```

```
held
```

```
maxheld      barrier
```

```
limit        failcnt
```

```
prívmpages
```

```
230416
```

```
1045032      900000
```

```
1000000      363565
```

This is my node settting:

```
cat /etc/vz/conf/100.conf
```

```
VERSION="2"
```

```
ONBOOT="yes"
```

```
NUMPROC="10230:10230"
```

```
AVNUMPROC="5115:5115"
```

```
NUMTCPSOCK="10230:10230"
```
