Hi Roberto,

My experience is that you could best allocate more memory to your container and raise the privvmpages to a value higher than the maxheld value. See if your memory problem is gone or work from there to allocate more resources.

Cheers,

Esmé

Hello

I have an openvz node with only one container (Cpanel server).

Yesterday I had many memories issues:

"Unable to fork: Cannot allocate memory"

Can someone help me to optimize my node setting ?

I have a 4Gb node and I can use all node resources for the container.

This is my resources output:

<http://pastebin.com/iPXnf0Se>

It appears this parameter failed:

```
cat /proc/user_beancounters
Version: 2.5
      uid resource          held          maxheld
barrier          limit      failcnt
      privvmpages      230416      1045032
900000          1000000      363565
```

This is my node settting:

```
cat /etc/vz/conf/100.conf
```

```
VERSION="2"
```

```
ONBOOT="yes"
```
