Subject: [Users] Dual networks. Routing issue?

Hi,

<snip>

Here's the same output from the virtual host on x.x.x.179:

route -n

Kernel IP routing table

Destination	Gateway	Genmask	Flags	Metric	Ref	Use
169.254.0.0	0.0.0.0	255.255.0.0	U	1002	0	0
venet0						
0.0.0.0	0.0.0.0	0.0.0.0	U	0	0	0
venet0						

Can anyone advice?

=====

You need to add a route on the virtual host using the private IP as the gateway:

i.e using your example

On the 1st VPS:

```
route add -net 10.0.0.0 netmask 255.255.255.0 gw 10.0.0.179
```

On the 2nd VPS:

```
route add -net 10.0.0.0 netmask 255.255.255.0 gw 10.0.0.173
```

Best Regards,
CM Ho
