please correct me if i'm wrong, but i'm quite sure that when using venet the virtual adapter do not have a MAC. it's more like a point-to-point bridge.

Quote:

No ARP protocol support

Venet network device is explicitly NOARP, so there is no MAC address.

source: <http://wiki.openvz.org/Venet>

so if u wish to use different MACs for each IP, you would have to switch your networking to veth.
