please correct me if i'm wrong, but i'm quite sure that when using venet the virtual adapter do not have a MAC. it's more like a point-to-point bridge.
Quote:
No ARP protocol support

Venet network device is explicitly NOARP, so there is no MAC address.
source: http://wiki.openvz.org/Venet

so if u wish to use different MACs for each IP, you would have to switch your networking to veth.
