
Subject: Tasks hanging cause node to reboot/stall

This has been happening to me on every kernel since the earlier releases when I started testing the RHEL6 branch:

```
KERNEL: /usr/lib/debug/lib/modules/2.6.32-042stab036.1/vmlinux
DUMPFILE: /var/crash/127.0.0.1-2011-09-14-16:04:55/vmcore [PARTIAL DUMP]
CPUS: 24
DATE: Wed Sep 14 16:03:37 2011
UPTIME: 2 days, 01:57:38
LOAD AVERAGE: 1.77, 1.82, 1.74
TASKS: 2491
NODENAME:
RELEASE: 2.6.32-042stab036.1
VERSION: #1 SMP Thu Sep 1 17:06:37 MSD 2011
MACHINE: x86_64 (2393 Mhz)
MEMORY: 48 GB
PANIC: ""
PID: 813278
COMMAND: "httpd"
TASK: ffff8809de352980 [THREAD_INFO: ffff880bc964e000]
CPU: 13
STATE: TASK_RUNNING (PANIC)
```

The task will change from either httpd or mysqld or a random cpanel process, in all cases the kernel finds the tasks to be hung and panics.

Can anyone shed some light on this?
