Subject: Tasks hanging cause node to reboot/stall Posted by amoon on Tue, 20 Sep 2011 19:46:44 GMT View Forum Message <> Reply to Message

This has been happening to me on every kernel since the earlier releases when I started testing the RHEL6 branch:

KERNEL: /usr/lib/debug/lib/modules/2.6.32-042stab036.1/vmlinux DUMPFILE: /var/crash/127.0.0.1-2011-09-14-16:04:55/vmcore [PARTIAL DUMP] **CPUS: 24** DATE: Wed Sep 14 16:03:37 2011 UPTIME: 2 days, 01:57:38 LOAD AVERAGE: 1.77, 1.82, 1.74 **TASKS: 2491** NODENAME: RELEASE: 2.6.32-042stab036.1 VERSION: #1 SMP Thu Sep 1 17:06:37 MSD 2011 MACHINE: x86_64 (2393 Mhz) MEMORY: 48 GB PANIC: "" PID: 813278 COMMAND: "httpd" TASK: ffff8809de352980 [THREAD_INFO: ffff880bc964e000] CPU: 13 STATE: TASK_RUNNING (PANIC)

The task will change from either httpd or mysqld or a random cpanel process, in all cases the kernel finds the tasks to be hung and panics.

Can anyone shed some light on this?
