Subject: Adding RAM
Posted by schogge on Mon, 03 Oct 2011 14:25:04 GMT

Hi all,

I'm running a server with 4 GB of RAM and around 20 small guests without any problems. To increase the number of guests I need to add some memory. I would like to put another 4 GB in the server to have 8 GB.

Do I have to ajust anything on OpenVZ or the OS or can I just mount the ram?

Thanks,
schogge
