Hi, i stcuk at starting up Auditd at Debian 6 OpenVZ container, with init.d starting script i have error:

```
Oct 4 12:57:42 vps07 auditd[3994]: Started dispatcher: /sbin/audispd pid: 3996
```

```
Oct 4 12:57:42 vps07 audispd: priority_boost_parser called with: 4
```

```
Oct 4 12:57:42 vps07 audispd: max_restarts_parser called with: 10
```

```
Oct 4 12:57:42 vps07 audispd: af_unix plugin initialized
```

```
Oct 4 12:57:42 vps07 audispd: audispd initialized with q_depth=80 and 1 active plugins
```

```
Oct 4 12:57:42 vps07 auditd[3994]: Unable to set audit pid, exiting
```

```
Oct 4 12:57:42 vps07 auditd[3994]: The audit daemon is exiting.
```

```
Oct 4 12:57:42 vps07 auditd: Cannot daemonize (Success)
```

```
Oct 4 12:57:42 vps07 auditd: The audit daemon is exiting.
```

```
Oct 4 12:57:52 vps07 audispd: priority_boost_parser called with: 4
```

```
Oct 4 12:57:52 vps07 audispd: max_restarts_parser called with: 10
```

```
Oct 4 12:57:52 vps07 audispd: af_unix plugin initialized
```

```
Oct 4 12:57:52 vps07 audispd: audispd initialized with q_depth=80 and 1 active plugins
```

Unable to set audit pid, hmm try to strace (see attach)
