Hi Daniel,

What's your setup? You have 1 'internal' NIC with an IP-address and other
NIC's without IP-address who you want to connect inside a container, for
what purpose?

If you use veth you could theoretically set up a bridge with one of those
devices, that would be easiest in my opinion. But why would you consist on
venet?

Probably with a little bit more information we can help you a bit further.

Kind Regards,

Esmé

Onderwerp: [Users] several nics on the hn

Hello,

I've several nics on the hostnode. Only the internal service nic have an
internal IP. The other nics are without IPs and connected to different
internal subnets and public www.

I've read the differences between venet and veth
http://wiki.openvz.org/Differences_between_venet_and_veth
and want to use venet, but only venet0 is active in the hn, I think this is
connected to eth0, but how to access the other nics?

Thanks
Daniel
