Subject: External IP addresses on a Partition dedi
Posted by Malchus on Sat, 08 Oct 2011 16:13:16 GMT

We're trying to set up virtual machines, effectively virtual servers, for a VPS startup. We have one physical server, and we are attempting to partition that to allow customers SSH and FTP access to their guest machines, and have the ability to connect with a unique external IP address. Unfortunately, we don't know how to have an external IP point to a guest machine in our server, how would we do this in OpenVZ?
