I would definitely upgrade the kernel as there are some new features on part of cpu load per VZ

Aptitude hold <package>

Hi All!

there a way to exclude original kernel from upgrades?

```
apt-get upgrade
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following packages will be upgraded:
aptitude base-files ca-certificates firmware-linux-free grub-common grub-pc
libgssapi-krb5-2 libgssrpc4 libk5crypto3 libkadm5clnt-mit7 libkadm5srv-mit7
libkdb5-4 libkrb5-3 libkrb5support0 libssl0.9.8 linux-base
linux-image-2.6.32-5-amd64 linux-image-2.6.32-5-openvz-amd64 openssh-client
openssh-server
openssl tzdata usbutils
23 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
Need to get 69.8 MB of archives.
```

After this operation, 7,168 kB disk space will be freed.

Best Regards!

Davit Macharashvli
