I always update openvz kernel . I exclude only original kernels from upgrades. I tried ("aptitude hold linux-image-2.6.32-5-amd64 " than upgrade it works for me.

Thanks.

I would definitely upgrade the kernel as there are some new features on part of cpu load per VZ

If u really don't want it to be updated type

Aptitude hold <package>

Hi All!

A want to upgrade my openvz host on debian squeeze. When I run "aptitude upgrade," it shows me to upgrade base kernel too. Is it recommended? Or is there a way to exclude original kernel from upgrades?
