I guess so. Booted back to 37.1 on those servers who have this kernel installed.

One server only has 39.3 - how can I force yum to install 37.1?

```
# yum install vzkernel-2.6.32-042stab037.1.x86_64
```

```
Setting up Install Process
```

```
No package vzkernel-2.6.32-042stab037.1.x86_64 available.
```

```
Error: Nothing to do
```
