Officially supported platforms are:

- x86 (a.k.a. i386)

- x86_64 (a.k.a. AMD64, a.k.a. EM64T)

- ia64 (a.k.a. Itanium)

Still, tools' code should be portable... Attached patch fixes the bug.

PS Package build fails probably because of -Werror in CFLAGS set in
vzquota's Makefile.
