
Subject: [PATCH v4 2/3] SUNRPC: optimize net_ns dereferencing in rpcbind creation calls

Posted by [Stanislav Kinsbursky](#) on Tue, 08 Nov 2011 10:43:17 GMT

[View Forum Message](#) <> [Reply to Message](#)

Static rpcbind creation functions can be parametrized by network namespace pointer, calculated only once, instead of using init_net pointer (or taking it from current when virtualization will be completed) in many places.
