Subject: How to apply patch ?
Posted by VPSCube on Sat, 19 Nov 2011 05:32:54 GMT

Hi all,

I'm having this kernel error on my messages logs. Last day I got my server down because of that (not sure) . I have searched this and found that already has a kernel patch.

I think this is the bug ;
 bugzilla.openvz . org/show_bug.cgi?id=1954

Is there tutorial how to apply patch simply , or is it already patched on new releases ?

Currently using Centos 6 64 bit and 2.6.32-042stab039.11 kernel.

Thanks advanced!

Error Output
Nov 19 06:55:37 cube2 kernel: [13196.056354] Core dump to |/usr/libexec/abrt-hook-ccpp /var/spool/abrt 4243 8 0 0 pipe failed
Nov 19 07:05:58 cube2 kernel: [13814.958246] Core dump to |/usr/libexec/abrt-hook-ccpp /var/spool/abrt 4424 8 0 0 pipe failed
Nov 19 07:16:09 cube2 kernel: [14424.472190] Core dump to |/usr/libexec/abrt-hook-ccpp /var/spool/abrt 4595 8 0 0 pipe failed
Nov 19 07:21:19 cube2 kernel: [14733.994569] Core dump to |/usr/libexec/abrt-hook-ccpp /var/spool/abrt 4679 8 0 0 pipe failed
