Subject: [PATCH 0/6] SUNRPC: make RPC clients use network-namespace-aware PipeFS routines

Posted by Stanislav Kinsbursky on Wed, 23 Nov 2011 10:58:44 GMT

View Forum Message <> Reply to Message

This patch set was created in context of clone of git branch: git://git.linux-nfs.org/projects/trondmy/nfs-2.6.git. tag: v3.1

This patch set depends on previous patch sets titled:

- 1) "SUNRPC: initial part of making pipefs work in net ns"
- 2) "SUNPRC: cleanup PipeFS for network-namespace-aware users"

This patch set is a first part of reworking SUNPRC PipeFS users. It makes SUNRPC clients using PipeFS nofitications for directory and GSS pipes dentries creation. With this patch set RPC clients and GSS auth creations routines doesn't force SUNRPC PipeFS mount point creation which actually means, that they now can work without PipeFS dentries.

The following series consists of:

Stanislav Kinsbursky (6):

SUNRPC: handle RPC client pipefs dentries by network namespace aware routines

SUNRPC: handle GSS AUTH pipes by network namespace aware routines

SUNRPC: subscribe RPC clients to pipefs notifications

SUNRPC: remove RPC client pipefs dentries after unregister

SUNRPC: remove RPC pipefs mount point manipulations from RPC clients code

SUNRPC: remove RPC PipeFS mount point reference from RPC client
