To which *.conf file have you added this? It is needed in vz.conf so the modules get loaded by starting OpenVZ at the HN. You will also need ipt_filter as far as i remember. You can try iptables with contrack on the HN, if it works there it should work inside VE too. But don't try it with IPv6.

Check with lsmod on the HN what is loaded. The VE is not able to load any modules on demand.

Regards

Andreas
