weird.. it went okay on my test system:

[snip]

```
Installing: sudo          ##### [141/174]
Operating system is CentOS Linux
Installing: webmin        ##### [142/174]
Webmin install complete. You can now login to
http://fc4ovz.party-service.lan:10000/
as root with your root password.
Installing: sharutils     ##### [143/174]
[snip]
```

strange that it says that it cannot find "rm". Can you try creating a cache without webmin and see if it doesn't fail?

Aistis
