weird.. it went okay on my test system:

[snip]
Installing: sudo   #################### [141/174]
Operating system is CentOS Linux
Installing: webmin   #################### [142/174]
Webmin install complete. You can now login to
http://fc4ovz.partyservice.lan:10000/
as root with your root password.
Installing: sharutils   #################### [143/174]
[snip]

strange that it says that it cannot find "rm". Can you try creating a cache without webmin and see
if it doesn't fail?
